

Accu-Cut Advantages

Welded Frame Design

All Accu-Cut frames are constructed with laser cut precision and are welded to guarantee a square finished product.

(CAUTION: A bolt-together frame assembly may result in an off square machine that will telescope rolls if the fasteners become loose from operation!)

“The best investment this company has ever made.”

Foot and Inch Counter & Large, Aluminum Measuring Wheel

“The relationship with Accu-Cut does not end with the purchase of the machine. A quick phone call to their service department always produces answers and resolutions to any problems we may be experiencing.”

*Carpet Mill Outlet
Jonesboro, Georgia*

Accu-Cut machines come standard with a programmable foot and inch counter – no decimal conversion is required. The Accu-Cut measuring wheel, constructed to our strict specifications, is a large diameter, knurled aluminum wheel. The tremendous surface area provides excellent contact with the material ensuring the most accurate measurement possible.

(CAUTION: A smaller diameter measuring wheel will not measure as accurately as our large, aluminum wheel!)

High Capacity Load Cradle

Our large, open-ended cradles are constructed of heavy gauge steel rollers and supported by high quality, reinforced steel shafts. This superior design gives you a load cradle that will automatically center the roll of flooring and drastically reduce any chance of the material walking or telescoping. Beltless cradles allow for simple loading and eliminate any risk of damaging a belt while loading material.

(CAUTION: Narrow load cradles do not provide enough contact surface to adequately control the roll of flooring. Loss of control results in a roll that telescopes, bags and walks during use!)

“I wish everything in business could run as smoothly as my Accu-Cut machine.”

Wisconsin Rapids,
Wisconsin***

wheels!)

Our foot cable control is constructed with tightly twisted steel and then coated in plastic to provide a longer life expectancy. The cable is attached directly to the frame of the machine ensuring ease of access. Applying pressure to the cable engages the rollers allowing the operator to start and stop the machine away from the control panel.

(CAUTION: Other types of foot control devices that are not connected directly to the frame may not “stop and start” as precisely as our coated, twisted steel cable or may become entangled in the machine’s

Enclosed Motor Drives

Conventional motors and gear drives are positioned inside the frame of the machine for safety and protection. Our direct drive system is virtually maintenance free and will give you many years of dependable performance.

(CAUTION: Specialized, exposed motors mounted on the outside frame of a machine can be expensive and are subject to damage if hit with the forklift!)

“We purchased our Accu-Cut in 1990 and have been very pleased with our decision. The machine works as well today as it did the day we took delivery.”

Company Owned Delivery Service

“Our Accu-Cut has saved us countless hours of labor. The machine is extremely accurate and very simple for one person to operate.”

***Elkhart Carpets
Elkhart, Indiana***

carpet and vinyl!)

We deliver most machines with our own truck and driver. Our driver will set up the equipment and provide you with a professional training program ensuring your warehouse personnel feel comfortable operating the machine. WE WILL NOT LEAVE THE MACHINE UNLESS YOU ARE TOTALLY SATISFIED!

(CAUTION: A machine that is shipped via common carrier normally arrives crated and is more likely to get damaged during transportation. Untrained warehouse personnel could make expensive mistakes with your
